What Every Earthling Should Know

İsmail German, Orcid Id. 0000-0002-2014-260X, Retired research fellow of TUBITAK/MAM
isoger1@gmail.com & ismail.german@test-dr.com.
(To be submitted to a proper journal in Saudi Arabia)

Abstract: Our suggestion to construct an AI-Voltron was/is ignored, and we reinvestigated the situation we find ourselves today. We underlined that all major groups affecting our life has erred. We underlined their errors in a subjective way and invited the groups to a new assessment to attain objectivity. No supernatural being seems to be likely to reveal cosmic mysteries, the tasks is a homework to all great minds of today.

1. Introduction

Plato, c. 425–348 BC, gave an allegory depicted in Figure 1; it is a well-known allegory of human life on Earth, and he is also claimed to have said: "A philosopher aims to understand and perceive the higher levels of reality." It is further said that the other inmates of the cave do not even desire to leave their prison, for they know no better life [1]. The question is if they would be able to leave the cave if they knew, the trivial answer is "No, if they are created and driven". On one side, they seem to be smart enough; on the other, they seem to be driven. In this work, we try to handle this issue. We will try to find out who/what the light-blue dressed guards are, and how and why the humans are driven.

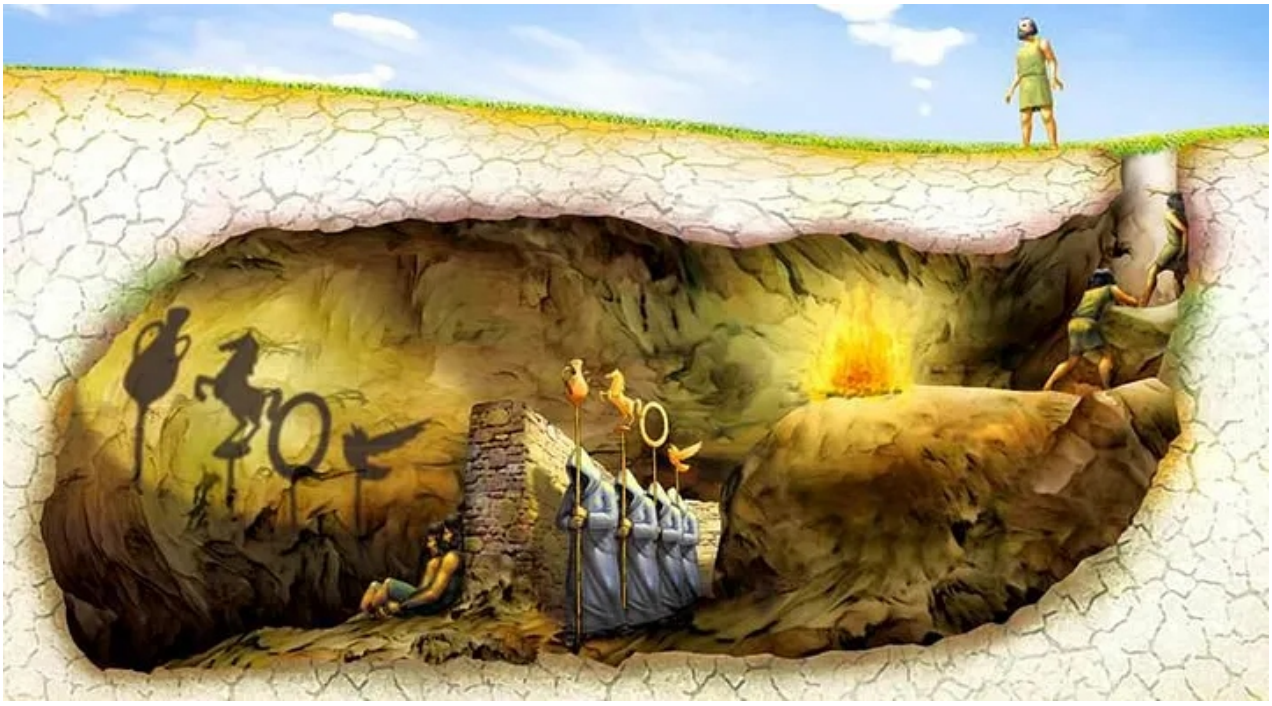

Figure 1. Plato's cave allegory [1a]

Plato's life span is known, meanwhile we have had a good deal of philosophers, light seekers, light workers and even scientists, and the vector distance we took seems to be given as follows (phrase taken from the beginning of Turkish tales): We went a little, we went a long way, we went over hills and valleys, and then we saw that we had gone a distance of a barley's length despite we seem to be aware that we are on the verge of extinction.

The process of light seeking began with Enoch, circa 14500 B.C. Enoch referred to Orion, but within the 4 millennia after him, the needle of the compass seems to have turned to Sirius in Göbeklitepe; this issue will be investigated within the body of this work. Additionally, the work was done in closed groups, and the reason for this behavior should also be pretty well investigated, clarified, and revealed.
Till Zoroaster, only Çatalhöyük may be mentioned. We now find out that the society therein was women-dominated, and Sirius worship was performed. Thereafter, we note Zoroaster the 1st, who is claimed to have been on Earth around 5000 B.C. He is considered by us as also Hermes the 2nd and Harut-Marut of the Quran. The related verse in the Quran, 2:102, explains the reason for closed teaching as knowledge stirs up trouble among humans.

The total of claims of what Zoroaster said regarding Orion and Sirius is a diverse set of hearsay. We only note “Thus Sirius would have been named as 'the one who belongs to the three stars'” [3] . To us, this phrase says Sirius is Orion’s dog. No surprise.

Till Naram-Sin, Nimrod, the teachings were kept locally and secret. Nimrod, on the verge of losing his empire, made some changes in regulations, the contents of which are not well given. After Nimrod, the Greeks seem to have had access to the secret teachings though.

As mentioned previously, after Nimrod, the Greeks had access to the secret knowledge in Accad and Egypt, and their teachings after their return home were also secret, in closed sects. A flame of light got fire, though, the life of the flame was not long. Jesus came to the Earth, and the life of the flame came to an end in a short interval thereafter.

The Quran describes/narrates this fact in 2:17 and gives the reasons in previous verses: The same reason we previously cited, stirring up trouble. The people are in an exam, and the exam is not open book; the answers will be given on the day of resurrection (ibid. 5:101, 69:18, 75:13, etc.)

The Quran has also praised thinking and knowledge. Based on these praises, some scholarly activity began among Muslims, and Gazali put an end to it. He simply said, “All is predetermined.”, and he was an authority. This may well be destiny as well as fate, and surely both do exist.

During the Middle Ages, some people were after the wealth of Solomon. They thought this wealth was based on sorcery, and they gave the name alchemy to their actions. Without any noticeable success.

The misery of the late Middle Ages and the printing machine opened a new era. The Renaissance and reforms began. To note thereby is that the Renaissance began on the roots of the well-known tree of knowledge. It also had intrinsically a doom and an apocalypse in the sense of filtering all exaggerations and arriving at full illumination before doom.

The Islamic world stayed almost by Gazzali. Additionally, Harname says in brief that humans tried to study and understand the world around them, God has given them some essential knowledge but they were not able to make proper use of this knowledge and prepared a doom with their own hands [4]

After a couple of centuries, we had an excellent 20th Century, especially its second half. Warnings regarding this excellency began with the 3rd quarter, and we now seem to need miracles in the 21st Century [5]. History repeating itself all the time seems to give birth to a new repetition with a possible end not yet observable. This situation reminds us of a game we played as children. We seem to be periodically slapped on the back after we got periodically and limitedly enlightened as in that game.

When we were children, in other words, in middle school, we used to play a game called "My partner! Who is the one who is pushing you away?" The Ebe, whose eyes we had blindfolded, would get slapped on the back of the neck until he figured out who drove had hit him, and our jaws would ache and our cheeks would go numb with laughter! The driver would be a child from the playing children, and the Ebe was usually a novice who didn't know the game or someone who had just joined us, and until one of us took pity and opened his eyes, he would get slapped by those he thought were his partner!

After this relatively long play, we ultimately need to find our own drivers; someone should show pity and open our eyes. Turning back to the main subject, we say Miracles do need God/Supernaturals, we need to investigate our drivers, and we investigate

Figure-2. The game mentioned

2. The State of the World

This is a broad subject; a Google search results in a good deal of references/works. Thinking practically, it should be answered just like the question asked once to Suleiman Demirel, a former prime minister and president of the Turkish Republic. A journalist asked him to express the state of Turkey with one word. He said “good” in case only one word is to be used, but “not good” if 2 words are allowed.

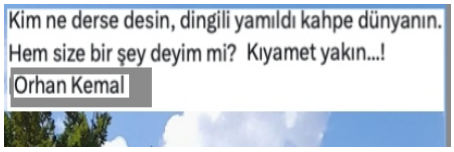

Figure 3: Orhan Kemal quote.

Orhan Kemal is a locally well-known Turkish novelist/writer. His quote in Figure 3 translated into English would almost have the following meaning: “Should I tell you something, the axis of the wicked world is bent. No matter what anyone says, the apocalypse is near.”

Almost half of the people we happen to speak with and ask about doom say it should happen within a period of 60-80 years. The same result is said to be obtained via a poll made in English-speaking countries, 50% of people answering the poll say the doom should be till the end of the 21st Century.
Aldous Huxley says that the deepest sin against the human mind is to believe things without evidence. Basic intelligence says the same, and beyond common sense, the following are facts and certainly evidence:

- The simulation done in MIT, the results of which published as "The Limits to Growth" predicted a collapse till the end of 21st Century.
- Gulf Stream [6].
- Super volcanoes [7,8].
- Earthquakes [9].
- Agriculture. To keep providing bread between now and 2050, we'll need another green revolution [10, 11].
- The 1st green revolution had also negative impacts [12, 13].
- Flora and fauna loss [14, 15]
- Soil [16].
- Extreme weather events [17].

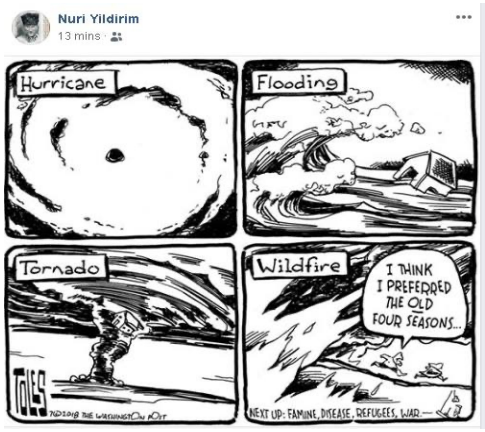

Figure 4: The good old days.

All these are probably correlated, the main reason being global warming. Considering only these evidences we may conclude that the humans will become extinct and the Earth will continue to revolve around the Sun, and it will probably recover.
It seems that it is not that simple; there are some other claims. In reality, there seems to be no need for such claims; on the reasons why they do exist speculations may be made. We approach it from a different aspect:

15. "He is the One Who smoothed out the earth for you, so move about in its regions and eat from His provisions. And to Him is the resurrection 'of all'."
16. "Do you feel secure that the One Who is in heaven will not cause the earth to swallow you up as it quakes violently?"
17. Or do you feel secure that the One Who is in heaven will not unleash upon you a storm of stones. Only then would you know how 'serious' My warning was!"

Figure 6: Quite interesting claims.

Figure 5: A rational conclusion.

Care of the following is taken:

- Eschatologies / end time events, all major cultures/civilizations seem to have them. Not a problem.
- They are almost all alike. Small problem.
- They include dates of end, which are heavily correlated. Important problem.
- They include correlation and a coded way of revealing. Highly important problem.

The oldest religion is certainly Shamanism, and we take here eschatology in a restricted sense as end-time events. The only tribe that has shamanism and end-time events predictions is the Hopi tribe, to the best of our restricted knowledge. Our first reference will be, and we emphasize the following [18]:

- What Dan Katchongva said.
- The 2 life paths on prophecy rock.
- Two references [19, 20]:

The references are vague, the terms are not well defined/known, but in summary, it is said that the 5th epoch will begin just after Betelgeuse goes supernova. There is a need for attention to:

- Kachina means spirit, and then is Sirius Katchina a spirit from Sirius. There is a reference to the consciousness of bodies coming from Sirius. The same is said by the Quran [21].

• The statement from melbrake, “It's been said that the Blue Kachina will come from the North, and the blue and red stars will meet up in the skies,” is to be understood as the meeting of katchinas from both.

• The Hopi Tribe should have immigrated to America at the end of the last ice melt, circa 11-12 thousand years ago. They seem to have Tibetan roots. Also the Schwarze Sonne from Tibet claims a new life after a solar eclipse.

- The Quran predicts doom after a supernova explosion and solar eclipse 75:7-8-9 (But when the sight is stunned, and the moon is dimmed, and the sun and the moon are brought together, with Footnote-1: They both will rise from the west and lose their light. Footnote indicates coding, a misunderstood coding).

and the sun and the moon are brought together, [1]

Footnote - 1

They both will rise from the west and lose their light.

Figure 7: Footnote, coding misunderstood [22].

- Hopi Tribe was more interested in space/events, but Mayans more in time. They had a calendar which is interpreted to give end of the world in 2012. There are works claiming that this date should be postponed by 50-100 years, which means the recent predicted date for doom is between 2062-2112 [23].
- The next prediction is from Zoroastrianism. Zoroaster the 1st is claimed to have said that the life of the World will be 7000 years. He is supposed to have been at Earth around 5000 B.C. We could not find the reference once we have read but Rosicrucianism, which has a rich set of union with Zoroastrianism supports this claim.

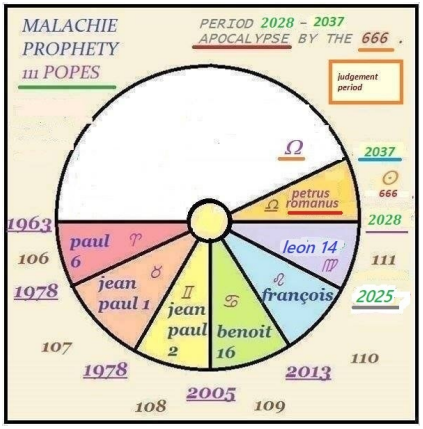

Figure 8: Calendar, Rosicrocianism

- Our next religion is Judaism. It claims (2025 is Jewish calendar year 5785) that the year 6000 will be the date of the Messiah.
- Christianity has 2 predictions:
    - • According to Sir Isaac Newton, the end-time events will begin at 2060 A.C.
    - • According to Pope Count, as seen in Fig. 8, this pope is the 111th among 112.
- Islam has no Quranic verse regarding the issue, but the Prophet is believed to have said it will not be earlier than 1980 and later than 2080.
- The prophet had an encounter which is named as Miraj/Ascension which could be astral projection after a definite space travel. The Quranic Verse regarding the issue is 17:1, and complementaries are given in 53:13-18. What we understand is that a real voyage has happened from Mecca to Jerusalem. Thereafter some kind of mirage/astral projection should have happened.
- We make such an interpretation because the prophet apparently described what he had seen in hadiths, and they are written based on the narration of the believers around him. They include 77 minor signs of the doom [24]. Almost all of them are heavily realized, and the 66th one, narrated by Ahmad, reminds us of an anecdote. One of our friends, who was pursuing his MBA at Istanbul University in 1972, made mention of a visiting professor from the USA. At that date, the basics of wireless communication began to be studied at Bell Labs, and Tesla’s vision was probably in the background. Anyway, the visitor should have said that mobile phones providing visual long-distance communication will soon be available. Our friend said that the faculty members of Istanbul University at that time thought the visitor was somewhat out of his mind. We were aware of the

research conducted, but we also could not imagine that visual long-distance communication would be available. How Ahmad narrated such a claim, and how the believers believed, is a mystery.

- A post in Facebook, Figure 9, reminded us of the narration number 19, again by Ahmad. We previously evaluated such a prediction as silly, so we investigated the case due to the character of Facebook posts. What we have found is below:

  "Testosterone levels are dropping, but not that much. Here's a better comparison. Your testosterone levels are about half of your Grandfathers at the same age. Part of the problem is modern men are not as active as previous generations, and don't do as many of the activates that naturally build testosterone in you systems. As an example, perhaps the best exercise for increasing testosterone is chopping wood. Well, kids these days don't chop much wood, that's been replaced with playing video games." (Quora)

  "Both studies observed significant reductions in testosterone levels over time. In the 2007 study, testosterone decreased by about 22% when comparing 1985-1987 levels to those from 2002-2004. In the 2021 study, researchers found a roughly 25% decrease between 1999 and 2016." (USA today)

Figure 9: A Facebook post

- About a year ago we wrote a paper [21]. There we showed the consistency of elusive verses of the Quran with current science. We also promised an award of about 30000 $ to anyone pointing out a crucial error on our line of thinking. The work is read by about 700 scientist, and none has shown any objection. Properly understood, the Quran, especially the elusive verses, are in complete agreement with science and can not be written by any human being in the years around 600 A.C.

Considering all-together we can only say that there should be something wrong with interpretations of the claims of texts of main religions so that people, especially scientists, have denied the truth involved. Up here we will concentrate on these issues.

3. Actors on Stage

3.1 People

Normal people are busy with their work, hardly related to global affairs and philosophies beyond, and strive to meet their basic needs. They have common sense, as the bektashi listening to a preacher in a mosque: Preacher says that God is neither on earth nor in heaven, neither eating nor drinking, neither born nor giving birth, etc. Bektashi says in response: "Hodja, you want to tell that he doesn't exist, but you can't find the proper words."

3.2 Our Religion(s)

The principal aim of any religion should be the protection of individual rights; otherwise, social order can hardly be protected. They should in principle, bring people to the base of proper actions, ethics, as shown in Figure 10.

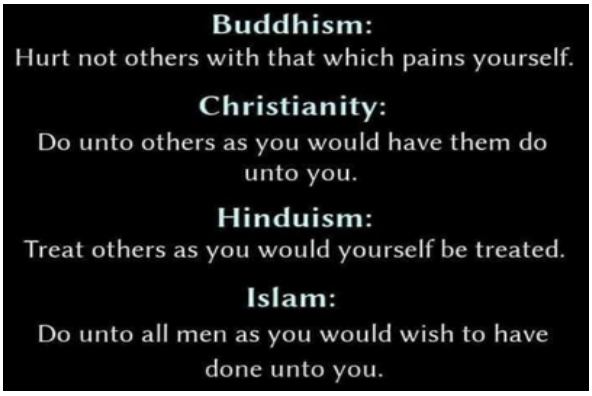

Figure 10: Basic properties of religions.

Original Islam/the Quran puts no person among God; 3:73 says only God can guide. On the other hand, practical life includes details which are not described/mentioned in holy books. The task is to decide about the details based on the essentials given in holy books, under the condition that they are the originals. Even if they are originals, they have a good deal of shortcomings. To find the answer, humans should often communicate with the spirit/God within themselves. Besides inherited bigotry, two handicaps exist: the Right communication channel/right frequency and impedance match. It is a pretty hard task for all of us, and the issue is handled by religious authorities.

As a result, the clergy was born, and Islam also had its own. The trouble is that no clergy without men having 3 heads as described in [21]. The clergy tried to build up a world view likely to drive the average man to religious way of life, without success. Some deficiencies are below.

3.2.1 Universe

Hawking said, "The human race is just a chemical scum on a moderate-sized planet, orbiting around a very average star in the outer suburb of one among a hundred billion galaxies. We are so insignificant that I can't believe the whole universe exists for our benefit. That would be like saying that you would disappear if I closed my eyes." If the Universe is infinite, as it should be, then this claim is valid for any region within it of finite dimensions. Finite dimensional regions may contain conscious beings having different assessment though.
The same was also said by Feynman, he said the cast is to big for the drama. They both are right. Creation is derived from a verb; the related verb should convey an action, and an action is to be local. An infinite free space can not be created; it should ab initio exist. A creator should be somewhere in this space, and material bodies can not be created form free space. Speaking of creation from energy is nonsense, energy is always there where material bodies exist, because, ab initio and as an intrinsic property, the bodies move. The basic constituents should be simple, identical, indivisible particles; otherwise, the stability of bulks would be a problem.
In Quran 55:17, 9:129, and 2:255 exist, but nowhere in it does God claims to be the creator and lord of the whole universe. Islamic clergy stayed under the effect of Christianity, as is the case regarding the following issues.

3.2.2 Omnipresence (space/time independence)

Not logical because it would be equivalent to absolute free space. Just the opposite, based on 32:5, 7:206, etc., the Quran and a hadith depict a local lord somewhere between the belt stars of Orion with dimensions approximately 5 l.y. The picture is similar to Jacob's Ladder. 32:5 and 3:109 also say He directs the affairs on Earth, but how he does it is not described.

وَيَبْقَىٰ وَجْهُ رَبِّكَ ذُو ٱلْجَلَٰلِ وَٱلْإِكْرَامِ ﴿٢٧﴾

Only your Lord Himself,[1] full of Majesty and Honour, will remain ˹forever˺.[2]

Footnote - 1

lit., your Lord's Face.

Figure 11:Another example

Regarding time, time does not exist as a physical quantity; it is a count of periodical vibrations. It exists if a conscious body counts the number of vibrations. We count because our bodies have similar oscillations, they get hungry, sleepy, middle-aged, and elderly, and need care accordingly.
22:47, 32:5, 70:4, etc. indicate that the Quran's God also counts.
55:31 is translated as "We will soon attend to you, O two multitudes ˹of jinn and humans˺!" may be interpreted as a time-multiplexing, despite today's interpretations.
55:26 says everything on Earth will perish. 55:27 says only the "face/outer boundary" of the Lord will remain forever. Thought together with 2:28 with the last verb being without object/passive, the picture we have of our Lord may change a good deal.

3.2.3 Omnipotence

إِلَّا مَنِ ٱرْتَضَىٰ مِن رَّسُولٍ فَإِنَّهُۥ يَسْلُكُ مِنۢ بَيْنِ يَدَيْهِ وَمِنْ خَلْفِهِۦ رَصَدًا ﴿٢٧﴾

except messengers of His choice. Then He appoints angel-guards before and behind them

لِّيَعْلَمَ أَن قَدْ أَبْلَغُوا۟ رِسَٰلَٰتِ رَبِّهِمْ وَأَحَاطَ بِمَا لَدَيْهِمْ وَأَحْصَىٰ كُلَّ شَىْءٍ عَدَدًۢا ﴿٢٨﴾

to ensure that the messengers fully deliver the messages of their Lord—though He ˹already˺ knows all about them, and keeps account of everything."

Figure 12: An omnipresent creator would not need angel-guards.

The Quran speaks of an almighty creator in many verses/locations, but this is a restricted omnipotence, just to make the long story short. The evolution, the time required for resurrection, and the Figure 12 are evidence. The Lord in the Quran does not claim that He created the laws of the Universe; He claims He just behaves accordingly, being well aware of them. For example, He says He is the creator, having done this previously and being informed how it is done in verse 36:81.
He nowhere speaks of creation from nothing.
Exaggeration are very probably a result of priesthood arrogance. They could not easily use the phrase "I do not know". They surely have reasons to behave that way.

3.3 Esotericism/Freemasonry

Esotericism is the interface between religions and science, and the most relevant institution in this regard is Freemasonry. Its study/consideration is a must.
Freemasons describe themselves as in Figure 13. Here, in this paper, is a good deal of truth; they certainly are allowed to contribute, but they can not. The stairs of the 30th degree are to be climbed up and down. Thereafter, they should teach the people what they have learned, but they can not. They are simply not allowed.
The Quran describes them as an intermediate between believers and nonbelievers in 2:8-20. Especially important are 2:10-17. 2:14 may have more interesting content than normally interpreted.
A good deal of people consider them as evil, as servants of satan.
That they could not find what they had expected is clear; a new suffering period is obviously dawning.
Indeed, a further explanation here is due:
Those of them who entered Freemasonry for profit or knowledge obtained it to a certain extent, depending on the case. That was needed for continuity.
Those who entered to help humanity have heard an ancient Ottoman poet, Nedim, saying, "Bir peri suret görülmüş, bir hayal olmuş sana (A fairy image was seen, it became a dream to you.)"

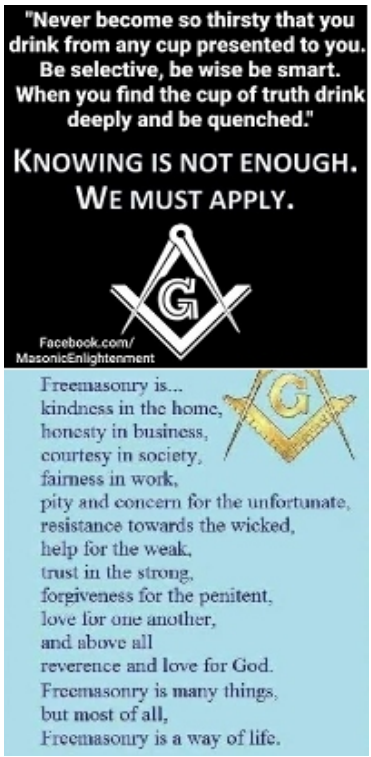

Figure 13: Self portrait

They are the heirs of Idris/Enoch (Hermes the 1st) and Zoroaster the 1st (Hermes the 2nd). The Lord wished, apparently also knowing what is to come, as 2:102 indicates, a small group to handle this knowledge. Freemasonry seems to have wished to distribute some of this heavenly knowledge to broader groups to attain prosperity and failed, as Harname predicted. They practically followed, being aware or not, Mephistopheles as Goethe also indicates. Some, not a great majority, of them may be aware of possible outcomes of their deed.
Not to forget is that they are also Dr. Faust of J. W. von Goethe. What Faust says is the same as Harname. So seems to be the fate. We are not looking for delinquency. 3:109 of the Quran very probably means that the main currents of events are determined by the Lord.
The modern Freemasonry has;

Figure 14: Topcoat

- lodges oriented to the East,
- a five-pointed star representing Sirius in every lodge,
- claims to be the widow's sons*,
- claims to be sons of light*,
- Manly Palmer Hall claims each and every freemason is born from the womb of Sirius,
- do often wear a grey topcoat as something like a uniform,
- if we accept that no men can be transported to Earth from any star-like location in space, they are good candidates to be the humans that the Canadian Defense Minister and the World Bank High Level Executive have once mentioned,

* Please refer to https://www.academia.edu/30377092/DUNYAYI_YONETEN_GUC_III for details.

- they, about 50% of them, have eyes and eyebrows that changed distinctly after initiation, and this change diminishes gradually in time.

We have had a long dance with them in the past, had both good and bad remembrances, seen bad and good humans among them. We evaluate most of them as people with good intentions. We do not forget thereby that;

- good intentions may be the pavement to hell as well as eden,
- John Kenneth Galbraith has written “The Age of Uncertainty” after “The Affluent Society”.

3.4 Today’s science

The basic elements of the universe very probably are all of the same kind, but too many, we are mathematically, discrete or analytical, unable to deal with that many parameters. So we do not understand basics, but we describe phenomena on an upper scale. We describe because much is expected from science under today’s heavy atmosphere, which puts us under pressure. The behavior of matter at the atomic, sub-atomic scale is evaluated to be not usual, because there exist too many of particles/parameters to deal with [25]

Regarding physics, it has two main branches: Theoretical and experimental. We need theory because we want to make predictions/guesses. The theory we get via experiments, and our traditional method was curve fitting. We tried to find the analytical expression describing/fitting to the experimental data. We made, and gradually, they happened to be virtual models. Figure 15 explains our views.

Figure 15: Our comment to an APS post in Facebook.

Figure 16: An observed disaster.

Theory has almost lost its ability to predict. It follows the experiment to a definite degree, as well as it can.

In addition, there seems to be no way to put physics onto its feet, to make it the old philosophy of nature. We are bound to go the artificial way.

4. Short Situation Assessment

Today we are face to face with global catastrophes, neither our understanding of these nor our means are enough to confront these phenomena. The danger of human extinction is at the front door, and our door is open.

Pointing to a possible way out, there are predictions. Even the Hopi Tribe, which immigrated to North America circa 12000 years ago, expects a kind of Messiah, a man who will warn and possibly persuade the people of today to the original route of humanity. We need to make thoughts on how the Tribe came to such an expectation. That the Tribe has such information/expectation completely in agreement with religions 10 millennia apart is important and gives us hope. We evaluate such an expectation to be useful, and we wish to expect it. Not being able to persuade our wife and SIL to use this path, our hope is also pretty weak. They want us to sell our inherited father's realty so that we will be able to buy our son a car that they all will use as they wish. They kicked us out of our own homes, occupied our workplace, which is our own property, and still express such a deed. We therefore assess the possibility of persuading people to lower their path as almost impossible. If such a vision is to come to the world, it can only be the result of the cooperative efforts of a majority of earthlings, and we made such an invitation previously [26]. That can only be managed if we, as a democratic majority, happen to understand the meaning of the observed conditions around us.

People need to forget what they have observed in the near past and should adjust themselves to the emerging conditions of the near future.

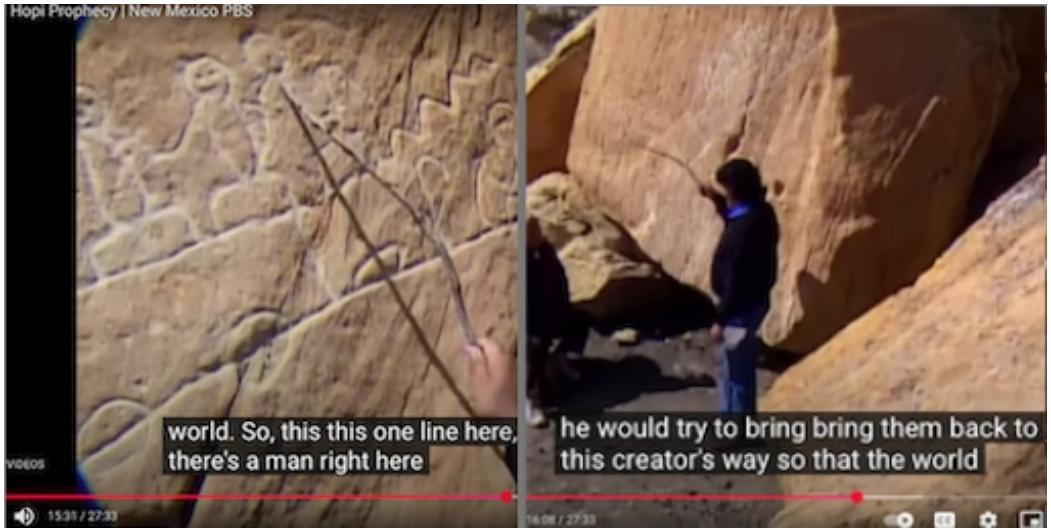

Figure 17: The oldest Messiah known.

5. Our model

Below we give the model we recently developed, which fits each and every data/information presented in this work. It could be a beginning and needs to be developed gradually till most people accept. We need to develop it to confront the Greater Middle East Project; to this end, we need to show that Turkey is somewhat like Istanbul's traffic, trying to change its borders costs much more than the possible gain. The World needs to develop it to prevent 3rd World War.

- Additional data: Orion and Sirius are locations that are associated with masculine and feminine gods by several human settlements throughout history. Anyone interested may simply make a Google search.
- Jacob's Ladder is a precious image from the past. Based on Quran 32:4-5, at a distance of 1000 l.y. a very powerful being exists whom, e.g., the ancient Turks called "Gök Tanrı", American Indians called "Great Spirit/Manitoo", Ancient Egyptians called Osiris, etc.
- The amount of volume He normally occupies, so-called Arsch in Quran, may be estimated to be a sphere of diameter around 5 l.y.; calculated based on a hadith narrated from Abu Zar el Ghiffari.

- The basic constituents of the universe are spherical, infinitely hard objects moving randomly in 3-dimensional space at the speed of light. The entire universe is filled with them; they exist eternally and will continue to exist eternally. They may form stable bundles of different sizes and of differing life spans if their density in the location/volume is above a certain threshold.
- Light is a disturbance in the medium consisting of these indivisible particles traveling with the speed of light; it is a so-called transverse wave. It can also be formed and travel in media below the density threshold. The Great Spirit describes His structure as "Allah is the Light of the heavens and the earth. His light1 is like a niche in which there is a lamp, the lamp is in a crystal, the crystal is like a shining star, lit from ˹the oil of˺ a blessed olive tree, ˹located˺ neither to the east nor the west,2 whose oil would almost glow, even without being touched by fire. Light upon light! Allah guides whoever He wills to His light. And Allah sets forth parables for humanity. For Allah has ˹perfect˺ knowledge of all things." which we are unable to understand (Quran 24:35). To note is the restricted support of the statement, consisting of Earth and Heavens, is probably seven protective layers around Earth, up to Arsch.
- "Face" should be the basic, eternal form, staying stable even in case the local density is below particle-stability density. That we can claim because the Lord says, 55:26-27, "Every being on earth is bound to perish. Only the face of your Lord, full of Majesty and Honor, will remain forever". A similar situation should have been valid before the Milky Way came into existence. To note is that He can not prevent the vanishing of every material body in the Milky Way.
- There should be some reasons why humans have been created. Two issues may be considered in this regard:
  1. Humans are created from soil/solid matter. They are extremely efficient. As a result, they may be used to process and interact with solid matter.
  2. The spirit is expected to return to the Creator, and this implies the value given to it. About 120 billion people are supposed to had/have a life on Earth, and assuming some 3 gr. for each spirit total mass will be somewhere around 360 thousand tons. This implies its importance should be based on quality and not quantity. The evolution of spirits/fire/plasma within bodies/soil/solid during this and 2nd life should and may be important for the Lord.
- Humans are pretty fragile, so far as meteorites are concerned, so they should have a pretty protective home. Regarding Orion Spur, the central areas were more active than the borders. Earth was created or later placed around the Sun, which is almost at the border and pretty safe. There is a good deal of distance between the place of conceptual creation and the humans' home, and a plausible way for the return trip to creation's location should be designed. To this end, Earth is kept nuclear active. A trigger for a safe, at the desired time ending design was also needed, and Betelgeuse was chosen as the triggering module. After the trigger's effect, the Earth is to get a somewhat controlled explosion to go back to the Orion Belt Star's vicinity. An increased velocity of 60 km/s seems enough, and the voyage will take about 5 million years. This may well be the so-called "Haşir süresi/time to resurrection" mentioned in Islam. No omnipotency, but intelligent design.
- The aim of creation can hardly be recognition of the Lord, angels, and jinn, who were already there, have been created, and recognizing the Creator (Quran 7:206 and 72:24). Humans and the genetic residues were needed, and to this end, the Earth was needed. To make such a long-term design, the Lord should be really powerful.
- Now the stage for the drama is there, but the actors are also to be controlled, otherwise the experiment may not be efficient, and give all the results desired. To this end, the star Sirius has been created or put in its place in the heavens (about 230 million years ago), well before humans were on Earth.
- Sirius seemingly helps control mankind in 2, probably 3, ways:
  - As mentioned in [21] and justified, via plasma particles and plasmons entering the human body and affecting the sensory parts of its organs.
  - Via affecting the human brain during secret talks in properly designed lodges. To understand this, verses 58:10, 53:49, and 8:48 of the Quran should be considered altogether, and the resultant should be attained.
  - Via possibly the way he, spirits from it, acted, as in Faust, as narrated by J.W. von Goethe, via some kind of real or imaginary appearance/formation in front.

  This way, the full spectrum of possible human actions will be utilized, and the full spectrum of exam questions will be answered within a definite quiz time.

Additional information: Emission of light from human body

Figure 18: Human bio-photon emission.

Figure 18 is about human bio-photon emission. There seems to be a correlation between photon sources and nerve endings. Interaction may be double way, and what we call our 6th sense may be related.

6. Discussion of our methods and results

Our method was data acquisition and processing to make information. We know this is subjective, and we hope to attain the objective with contributions from interested scientists.
We criticized people based on our observations. So are their personalities; they can hardly be changed. We believe they should rapidly change, and we certainly hope; we appreciate and love them.
We criticized clergy and religion professionals; we said they contributed a good deal of nonsense to religions. The result was/is that thinking men, especially scientists, would be cool against religion. The clergy needed a definite income to live, and they should give answers to the questions of people supporting them.
We criticized scientists; physics has over 15 branches, many of them having their own style to describe phenomena; a unified look, which has enormous requirements for human scale, fails. In addition, scientists were concerned about industrial development, neglected religions, and related hearsay. As the clergy, they needed an income to live upon.
We criticized Freemasonry, especially its deist philosophy. If the Creator were at infinite distance from us, having designed and showing no interest after designing all that He has created, his warnings and advice could not be with us, and His predictions could not come to be realized. Not to see this simple fact is hard to understand, and we can not find any rational reason for this kind of behavior.
The job they should do was/is to bring the pieces of Osiris together, and to revitalize Him. The myth and reality have commonalities as well as differences. Osiris was not killed and put into pieces by His brother, but by the next generations of humans having got the heavenly knowledge as 3:101 and 3:102 indicate. This should also happen in a closed-book exam.
Here we gave a try to bring the pieces together. Isis, glorified to the extent as in Figure 18, will never do this. We need to revitalize truth, because it is the only way to persuade the people on Earth to prefer the lower path and sharing.

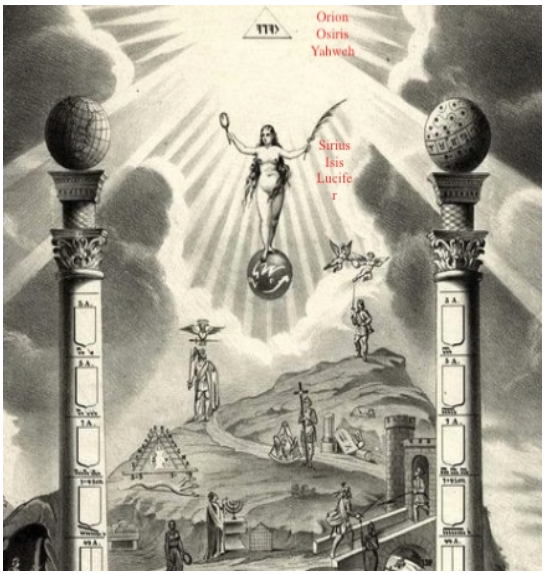

Figure 18: A part from Jacob's Ladder.

Osiris, Yahweh, Wedd, Manitoo, Great Hunter, etc., all masculine deities of history are to be associated with Orion, as implicitly said in 32:5 of the Quran.

Lucifer, Shiva, Sin, Isis, etc., all feminine deities of history, are to be associated with Sirius. 7:16 and 7:13 of the Quran are to be read and thought on. Not to forget that "Get down from paradise/"anna" of uri-anna, is said to Satan and humans, both Sirius and Earth are nearer to the galactic center.
Asena, the feminine wolf that has shown the Turks the way out during captivity in Turkish mythology, is very probably Sirius, because we called and still call our deity "Tan-Rı" which in reality means morning, light/star.
After the misery of the Middle Ages, we also got light from her via Freemasonry. Within a definite regard, Freemasonry had most of the properties of mesih-ud-deccal. It grew exponentially, had paradise for obeying and hell for disobeying. Understandable, because otherwise people would hardly follow. Pity, because we are now at a dead end. All that seems to be an essential part of the intelligent design, and realized.
Additionally, all these have been revealed to us, the main question now being what to do. What we wrote here is certainly subjective, which may be true with a probability of 75%. The objective percentage is to be investigated.
Based on the data we used, a plausible date for the doom is indicated by the two total Solar eclipses dated May 11, 2078 and May 1, 2079; they seem to be good candidates for beginning the voyage [27].
If humanity assesses this warning as serious, we should gradually take the lower path. This should be done globally, which also means hardly. If not, we will have the same fate, doom, after a 3rd W. W. The differences between them are hard to see, but we prefer the lower path.

7 Our excuses and a bit of success

We certainly know we need to control our mouth, mind, mood, manner, and money. Behaving not correspondingly, we had some hell-days:

- We were given birth control pills for about 2 years.
- We said to our nephew that Sirius affects the people as it affects the dogs. The nephew was an expert in the area of psychiatry, and he diagnosed us as paranoid, a good example of today's scientific diagnosis.

Within time, we happened to find data supporting our thesis, and time turned out to be the time of not being dumb. Anyone who loves humans can not stay dumb.
Our bit of success is that we happened to be able to persuade AI about soundness of our logic [28].

8. Conflict of interests

Only single author.

9. Funds used

None.
